Abortion pills put 5 Ohio women in hospital and caused 125 severe complications in 16 months.

"The Right to Life Action Coalition of Ohio has been aware of these reports for the last two years, and we agree that under-reporting is a significant concern. We appreciate the exposure of Operation Rescue and are preparing a report for the State Medical Board." Said Coalition President Margie Christie.

The 128 'Report of RU-486 Event' forms submitted to the State Medical Board of Ohio by abortion facilities statewide soundly refute the abortion promoters' claims of safety.

Planned Parenthood and other abortion businesses are scrambling to assure the public that the chemical abortion cocktail comprised of Mifepristone (formerly known as RU-486) and Misoprostol, is perfectly "safe," even without the oversight of a licensed physician.

However, Operation Rescue has obtained 128 "Report of RU-486 Event" forms submitted to the State Medical Board of Ohio by abortion facilities statewide that soundly refute the abortion promoters' claims of safety. The documents detail complications from chemical abortions that were reported by all eight Ohio abortion facilities from January 2021 through April 2022.

Below is a table that shows the names of each facility and the number of complication reports submitted to the Ohio Medical Board during that time frame.

Number of Chemical Abortion Complications Reported by Ohio Abortion Facilities

Full Year 2021 and First Four Months of 2022 (Partial)

FACILITY	CITY	COUNTY	FACILITY TYPE	2021*	2022 (PARTIAL)	TOTAL
Bedford Heights Planned Parenthood	Bedford Heights	Cuyahoga	Surgery & Pills	11	2	13
Capital Care Toledo (aka Toledo Women's Center)	Toledo	Lucas	Pills	2	0	2
Northeast Ohio Women's Center	Cuyahoga Falls	Summit	Surgery & Pills	1	0	1
Mt. Auburn Planned Parenthood	Cincinnati	Hamilton	Surgery & Pills	37	6	43
Planned Parenthood of Greater Ohio	Columbus	Franklin	Surgery & Pills	5	0	5
Preterm	Cleveland	Cuyahoga	Surgery & Pills	10	0	10
Women's Med Dayton	Dayton	Montgomery	Surgery & Pills	35	8	43
Your Choice Healthcare	Columbus	Franklin	Pills	4	4	8
TOTAL EVENTS REPORTED				105	20	125

**Note: In 2021, one blank, unsigned form submitted. Two forms for one abortion were submitted and signed by different abortionists. One duplicate form was submitted. That brings the total number of forms obtained to 128.*

There is some evidence that complications to chemical abortions are being underreported. Last year, Operation Rescue filed a complaint against the Bedford Heights Planned Parenthood for [suspected underreporting](#).

The high-volume abortion facility conducted chemical abortions in 2019-2020, but did not report a single complication, even though in previous years, it filed one of the highest numbers of complication reports. After the complaint was submitted, the facility was not disciplined, but it did resume reporting.

In all, Ohio abortion facilities averaged nearly eight significant complications to abortion drugs each month that required additional medical intervention, including second or even third abortion attempts.

Troy Newman, President of Operation Rescue commented on the findings. "When the abortionists claim abortion pills are safe, remember these 125 women who had to endure unwanted surgical intervention, emergency room visits, blood transfusions, and hospitalization." "When that many women in one state suffer complications that require this level of intervention in just sixteen months, there is no way one can call abortion pills 'safe.'," added Newman. "Efforts by the Abortion Cartel to liberalize access to these drugs is dangerous and should be opposed."

Many Pro-Lifers Are Arguing Against Abortion the Wrong Way and It Could Cost Lives.

Letting the states decide the abortion question means that about 600,000 preborn babies will be butchered each year instead

of 862,000. While an improvement, our national shame won't end.

Parallel to the moral and constitutional question of letting the states decide on abortion is the same question regarding slavery that dominated the seven famous debates between Stephen Douglas and Abraham Lincoln.

Prior to the Civil War, slavery supporters argued in favor of letting the states decide whether to allow or prohibit slavery. They believed that was the reasonable and democratic middle ground between those for and against slavery. Their argument wrapped that evil institution in a democratic veneer known as popular sovereignty.

Popular sovereignty is a legitimate constitutional principle. However, slavery and the butchering of human beings by mass abortion-homicide aren't issues for a referendum.

In their [fifth debate](#), Douglas remarked that "in a Territory, the people can do as they please on the slavery question under the Dred Scott decision."

"I say to you that there is but one path of peace in this Republic, and that is to administer this Government as our fathers made it, divided into free and slave states, allowing each state to decide for itself whether it wants slavery or not."

"When Judge Douglas says that whoever or whatever community wants slaves, they have a right to have them, he is perfectly logical if there is nothing wrong in the institution; but if you admit that it is wrong, he cannot logically say that any body has a right to do wrong."

"Turn it in any way you can, in all the arguments sustaining the Democratic policy, and in that policy itself, there is a careful, studied exclusion of the idea that there is anything wrong in slavery."

Although a lifelong slave owner, Thomas Jefferson was conflicted. His fear of the [divine consequences of slavery](#) should be everyone's fear today regarding America's collective culpability for the ongoing shame of abortion-genocide: "Indeed, I tremble for my country when I reflect that God is just [and] that his justice cannot sleep forever."

With God's justice in mind, we hope the reader, with those he or she influences, will join us at PreBorn Americans United to pray that the Dobbs court overturns Roe and Casey by ruling that we are constitutional persons deserving protection from the moment of conception.

Her heart began to fail during pregnancy – but then her baby saved her life

According to the family's [GoFundMe page](#),

Veronica began experiencing shortness of breath and a rapid heart rate during her pregnancy. They would soon find out that she was experiencing heart failure. At 32 weeks pregnant, doctors performed an emergency C-section in the hopes of saving Veronica's life. Veronica, it turned out, had myocarditis, an inflammation of the heart muscle which can lead to death.

Baby Brooklynn had been kept in the NICU, but hospital staff decided to let her see her mother in case Veronica didn't survive. That encounter changed everything. "They brought her up to me... when they weren't sure if I was gonna make it or not, and they laid her in my arms," Veronica said. "I don't remember it, but they did do that."

Incredibly, at the moment that Brooklynn reunited with her mother, Veronica's vital signs improved. "It was probably a moment none of us will ever forget — just the vital sign reactions of mom and baby," St. Elizabeth NICU Manager Keri Hinson said. Calderon added, "And I don't think there was a dry eye in the station. And getting to actually watch it, and be a part of it ... was an amazing feeling."

While abortion advocates claim that abortion is necessary for women who experience complications during pregnancy, killing a baby through abortion prior to delivery is [never necessary](#). An emergency C-section such as Veronica underwent takes about an hour, while an abortion at 32 weeks would take three to four days, putting the mother in more serious danger if her life was truly at risk.

Aborting a Baby Doesn't Keep You from Being a Mother - It Turns You Into a Mother Who

Has Committed Homicide.

Is a pregnant woman scientifically a mother with a sacred, moral obligation to nurture the living child within her?

1. It is a scientific fact that all human life begins at the beginning — at the [moment of conception/fertilization](#). Where else? And because all human life begins at conception/fertilization...

2. It is a scientific fact that motherhood and fatherhood also begin at the beginning — at conception/fertilization. Therefore, any pregnant woman seeking and getting an abortion is, by simple logic and by scientific fact, a mother. And that is true even after she commits an abortion-homicide against her own child!

Even if our mothers and fathers want to kill us, and even if they are successful in doing so, honesty demands that they should still be referred to as "mother"

and “father” both to reinforce the scientific fact of our humanity and to reinforce the truth that they have violated the most sacred, God-ordained relationship between any two human beings: that between mother and child, and that between father and child.

Accept it or deny it, parenthood begins at conception/fertilization with the new life just created.

If our child-sacrificing nation is ever to redeem itself and save not only tens of millions of helpless preborn babies but their mothers as well, it must acknowledge and expose this Big Lie by informing absolutely everyone that an abortion-homicide doesn't magically convert a “pregnant woman” into an “un-pregnant woman.” It just means that she is now the mother of a dead child — a tragedy, not a cause for celebration.

The meaningful remedy for those suffering from having aborted their own children or who regret working in the abortion industry is repentance and God's forgiveness.

Those mothers and fathers, hurting from having aborted their own child, can find counseling from most pro-life organizations, but that is the specific mission of [Rachel's Vineyard](#).

COURT ORDERED RELEASE OF PFIZER DOCUMENT REVEALS 82% – 97% OF VACCINATED PREGNANT WOMEN LOST THEIR BABIES.

A recently released confidential document reveals that a startling majority of in utero babies died after pregnant women were injected with the Pfizer vaccine.

In the most recent release, on May 2, 2022, a document titled [reissue_5.3.6_postmarketing_experience.pdf](#) disclosed on page 12 that by February 8, 2021, 270 women had received the mRNA injection during pregnancy. But 238 cases were apparently not followed (“no outcome provided”). And, therefore, the pregnancy outcomes for those women are unknown.

The mere fact that 88% of the pregnant women injected were not followed throughout their pregnancies is deeply concerning since 124 of the 270 pregnant women had some type of adverse reaction (49 nonserious, 75 serious) according to page 12 of the same document.

Among those 34 pregnancies that are known, the report indicates that 28 babies died either in utero or upon birth. Only one outcome was reported as normal, and the remaining five were reported as “pending.”

270 Pregnant Women Exposed to Vaccine

Among those 34 pregnancies that are known, the report indicates that 28 babies died either in utero or upon birth. Only one outcome was reported as normal, and the remaining five were reported as “pending.” In analyzing Pfizer’s own data, it is clear that 82% – 97% of the documented pregnancy outcomes resulted in death. (The 15-point variation is dependent on the final outcome of those in the “outcome pending” category.)

“This report confirms information we released last year,” said Operation Rescue president Troy Newman. “We look forward to seeing some kind of accountability put in place for those responsible for hiding this crucial data from the public.”
